Cleaning and Structuring Data for Analysis

a) Identify and handle missing or inconsistent data

Step 1: Load the Dataset

Step 2: Clean Inconsistent String Fields (Convert Text Percentages to Numeric Measures)

Step 3: Handle Missing (Null) Numeric Values via Imputation

Math_Clean

b) Convert wide data into tall format
Step 1: Open the Data Source Grid

Step 3: Rename the Pivoted Fields Tableau replaces the four columns with two consolidated columns at the end of the table:
name the pivot field names and values as Subject and Score respectively
